

# Webinar: VisualARQ for Residential Architecture

**WHEN:** Spanish Session: December 16th; English Session: December 17th

**WHERE:** Zoom

Discover how VisualARQ 3 brings Flexible BIM capabilities to Rhino, enabling you to develop complete architectural projects—from **early design concepts to full project documents**—all within Rhino’s familiar interface.

In this 1-hour session, you’ll learn how to:

- How to model residential buildings using VisualARQ’s **BIM objects**
- How to generate **floor plans, sections, elevations, and schedules** directly from the 3D model
- How to **customize architectural elements** for design flexibility
- How to compute areas, volumes, and **reports** for project documentation
- How to collaborate with consultants using **IFC** and **DWG** export

Whether you’re working on conceptual designs or ready-to-build documentation, VisualARQ adapts to your process—offering the power of BIM without the usual limitations.

To make the session accessible across time zones and languages, this webinar will run in **three free identical sessions**:

## **SPANISH SESSION**
